NEC Technologies to Provide NEC and NeXTSTEP® Solutions

BOXBOROUGH, Mass., April 14, 1993 — NEC Technologies, Inc. and NeXT Computer, Inc. today announced that NEC will offer Intel-based hardware pre-configured with NeXTSTEP, the industry-leading object-oriented software platform for developing and deploying client/server applications. Terms of the agreement were not disclosed. Today's announcement follows NeXT's recent decision to cease production of its own hardware and to concentrate exclusively on developing and marketing its object-oriented NeXTSTEP software.

"We are delighted at the prospect of offering NEC computers running NeXTSTEP, which is clearly the industry's leading object-oriented software platform," said Mike Mitsch, manager of Computer Systems Marketing for NEC. "For customers seeking to deploy NeXTSTEP, we will offer fully configured hardware with hotloaded NeXTSTEP software."

NEC's Solutions program, launched in September 1992, enables corporate customers to order fully integrated and custom hotloaded desktop and laptop systems direct from NEC. The program is designed to reduce the cost associated with integration and configuration of PCs, thus enabling systems to be shipped directly from the factory to the end user.

"Our relationship with NEC is an important aspect of NeXT's strategy to provide our customers with integrated hardware and software solutions," said Erna Arneson, director of channel sales at NeXT. "NeXTSTEP customers will benefit from the exciting new technology offerings and custom solutions capabilities that
